

**Review of the Haitian Drug
Observatory (OHD) over the
last 2 years (2016 to 2018)**

The objective of the presentation is for the observatory to :

- Present a short summary on the observatory and with a focus on the structure
- Activities over the past 2 years
- The DIN, information on new drugs or new drug using behavior in your country
- Challenges faced by the observatory

Short summary on the observatory

- The Haitian Drug Observatory (OHD) carry out various activities to monitor and evaluate the Government Action against the drug in accordance with its objectives set in its action plan.

The objectives are

- In the first place, to provide the country with new and adequate information and statistics for the purpose of developing public policy adapted to the drug problem;
- secondly, the monitoring and evaluation of CONALD's actions in the field of repression against drug trafficking and the prevention of the abuse of these substances.

2. Activities of the OHD during the last 2 years (2016 to 2018)

The actions conducted by the Haitian Drug Observatory cover three main fields:

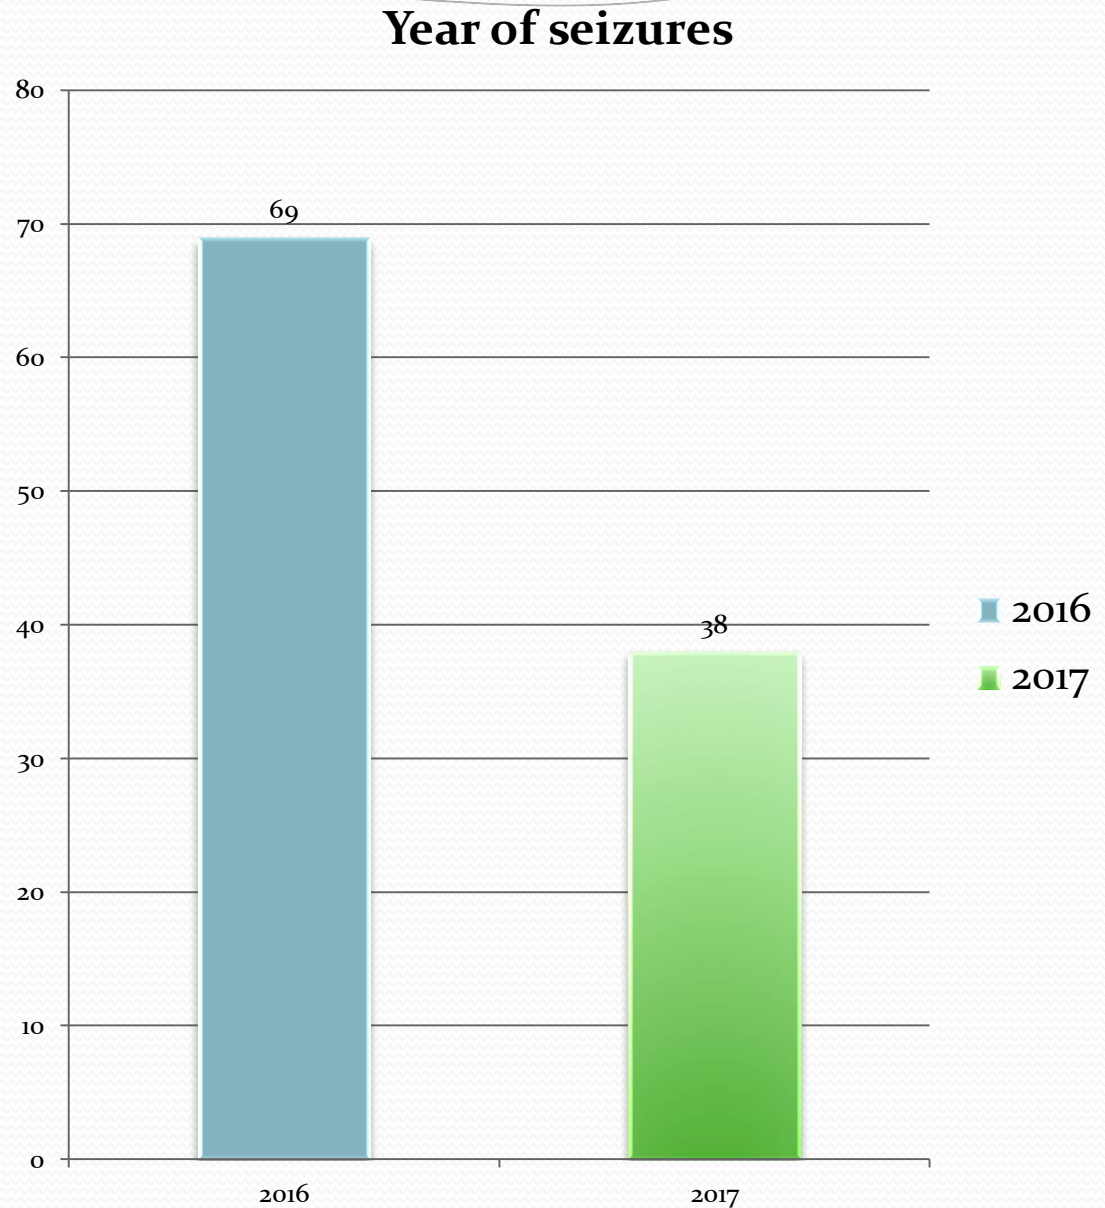

- Data collection,
- Data analysis,
- Publication and dissemination of information.

Data gathering

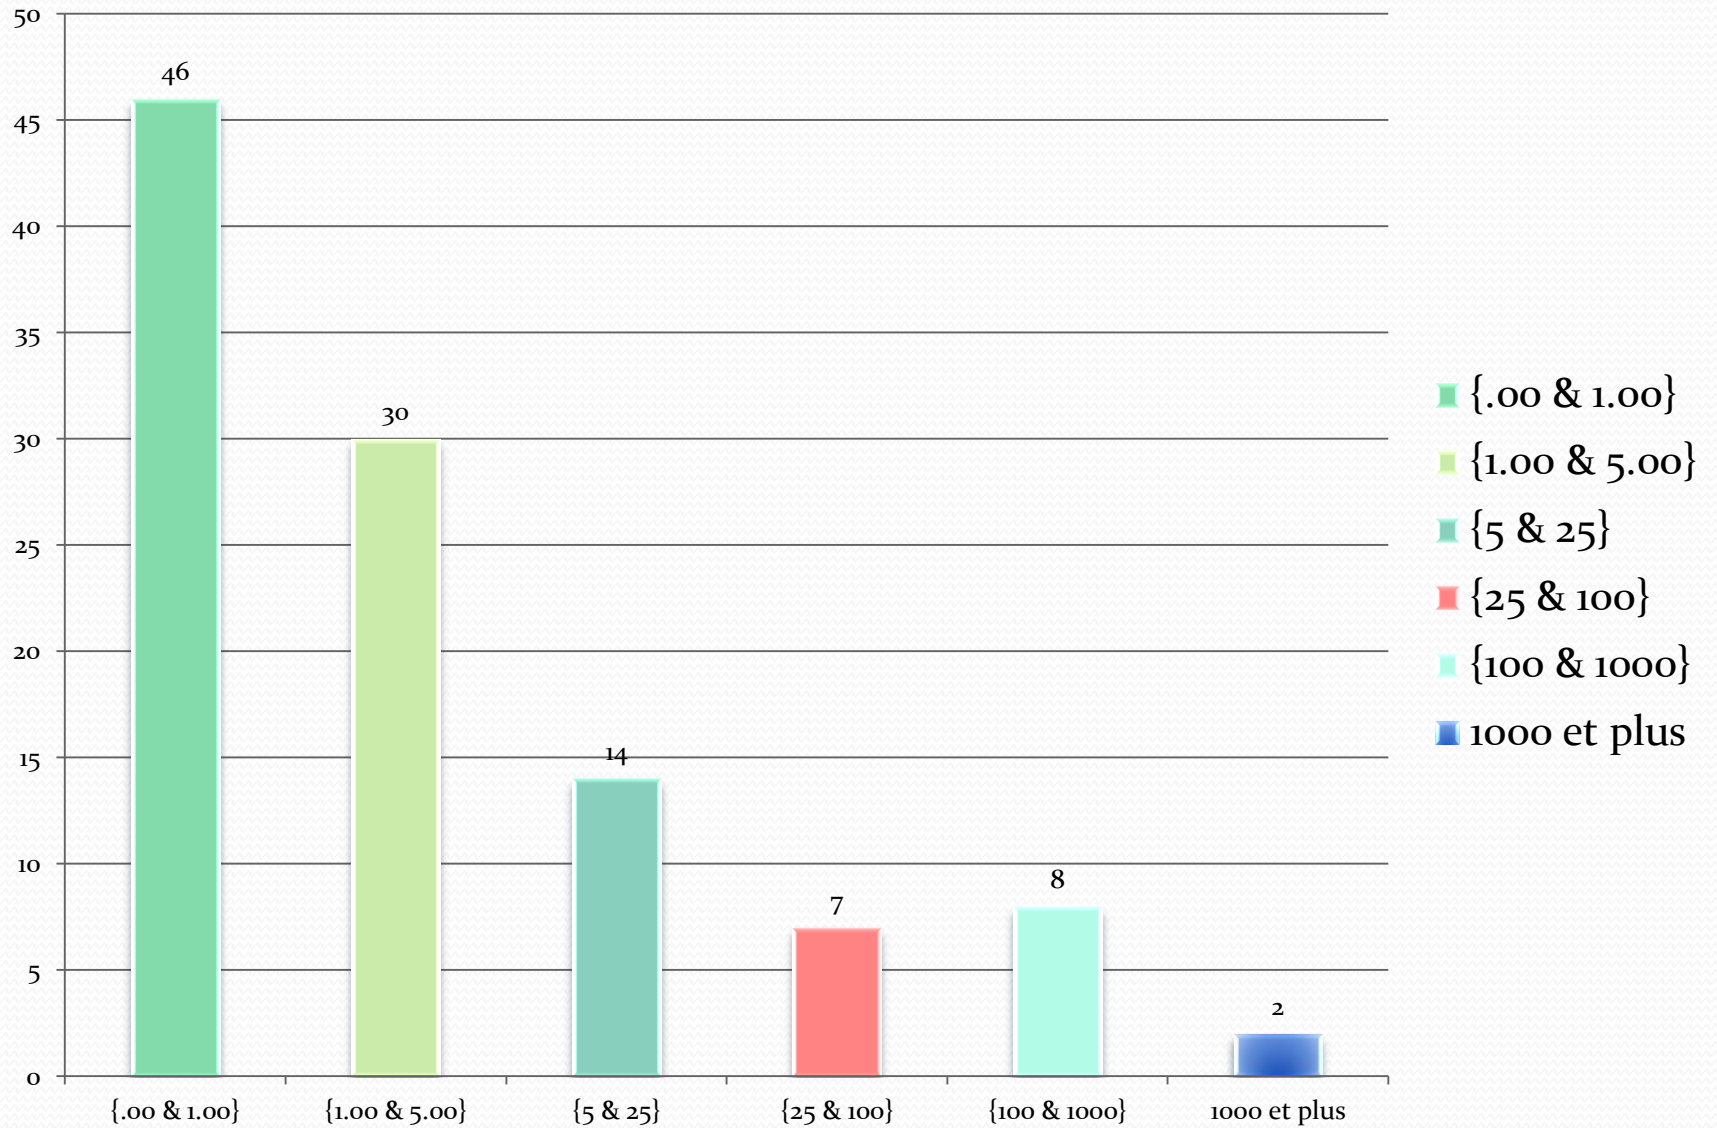

1. The OHD together with Conald Office consultants first completed all the necessary implementations for the first national survey at the national level
- However, the lengthy process and difficulties in acquiring the enumeration sector are still blocking the process

- ***2. The Observatory received the forms completed by the BLTS (Office for the Control of Drug Trafficking)***
- the entry of which was made at the level of the database created for this purpose.

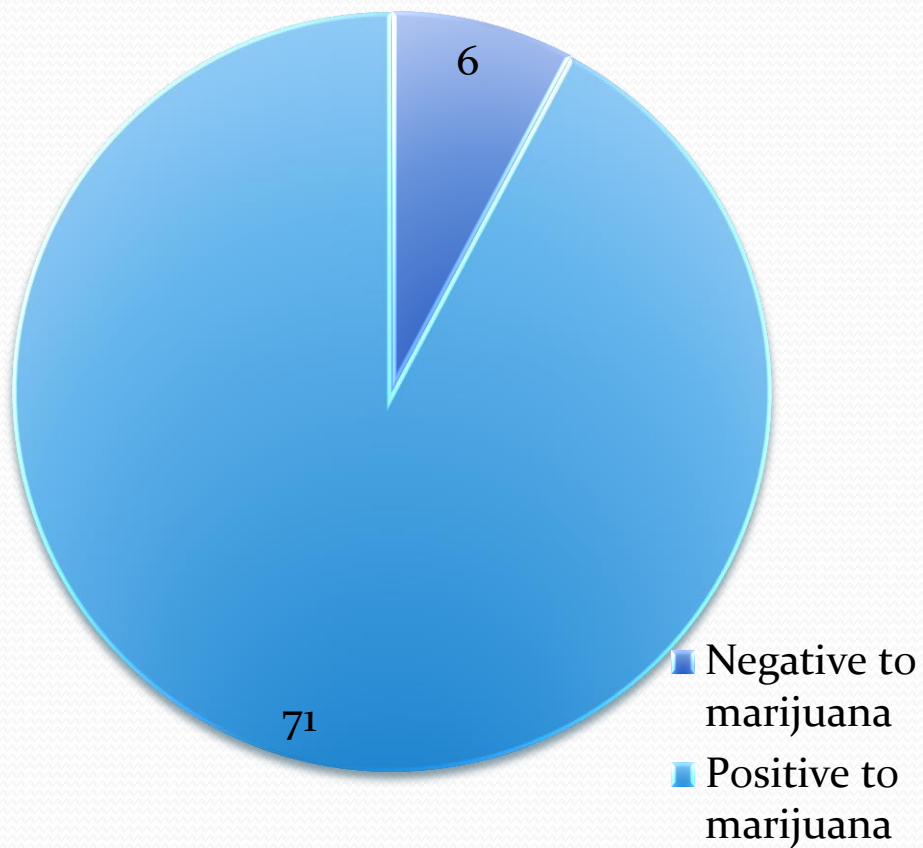

Over the past 2 years we observe:
69 operations of seizures in 2016
and 38 operations in 2017

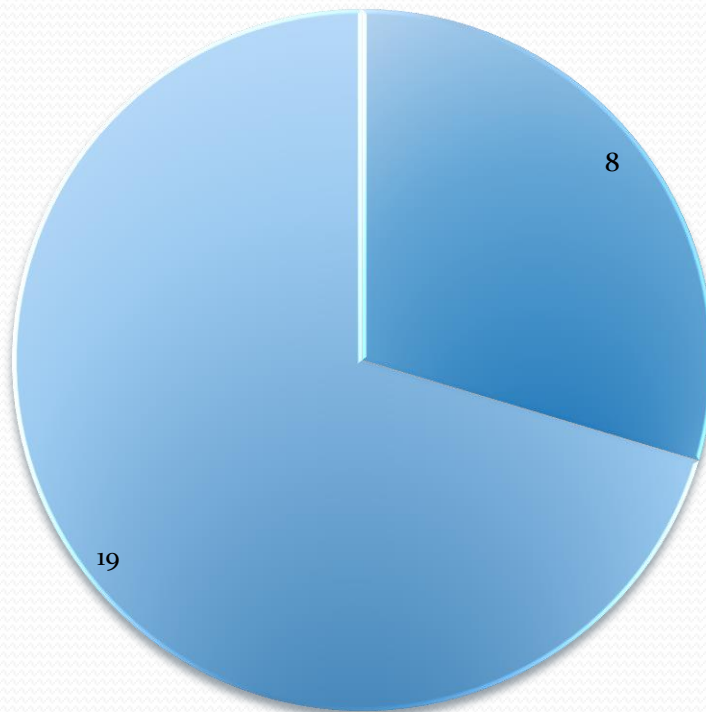

Weight of substances seized in Kg

Results of the marijuana test

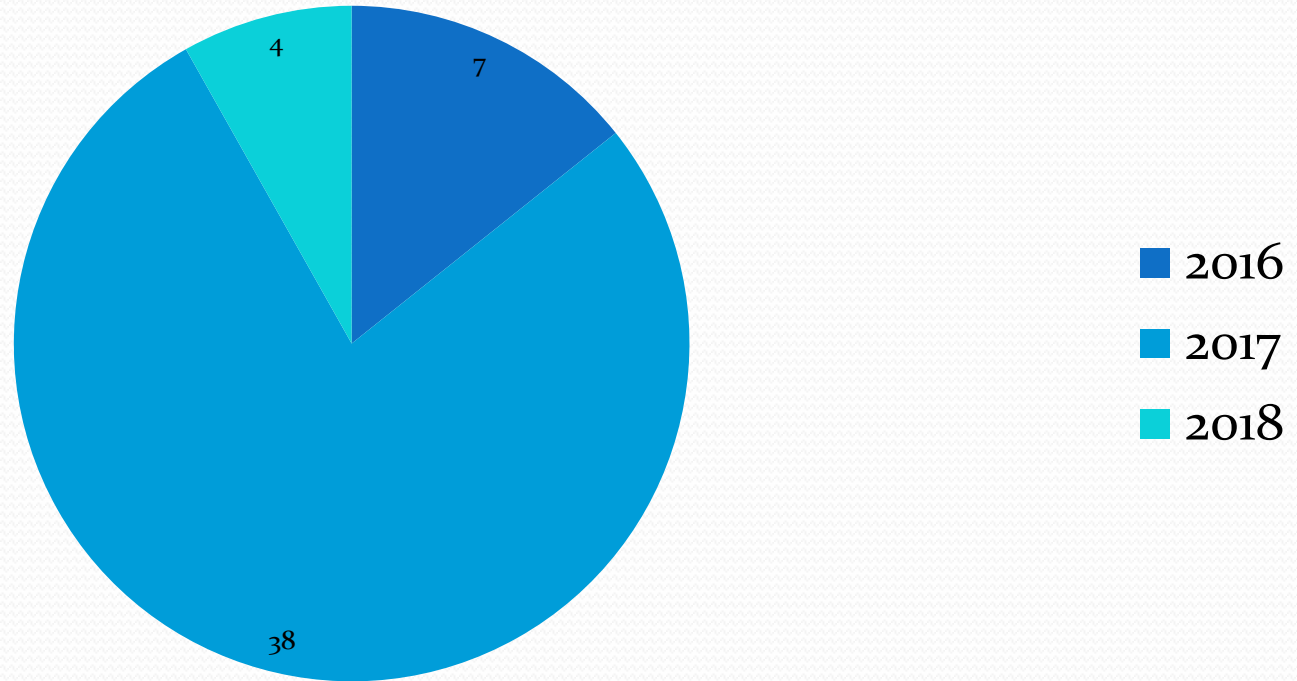

Results on the cocaine test

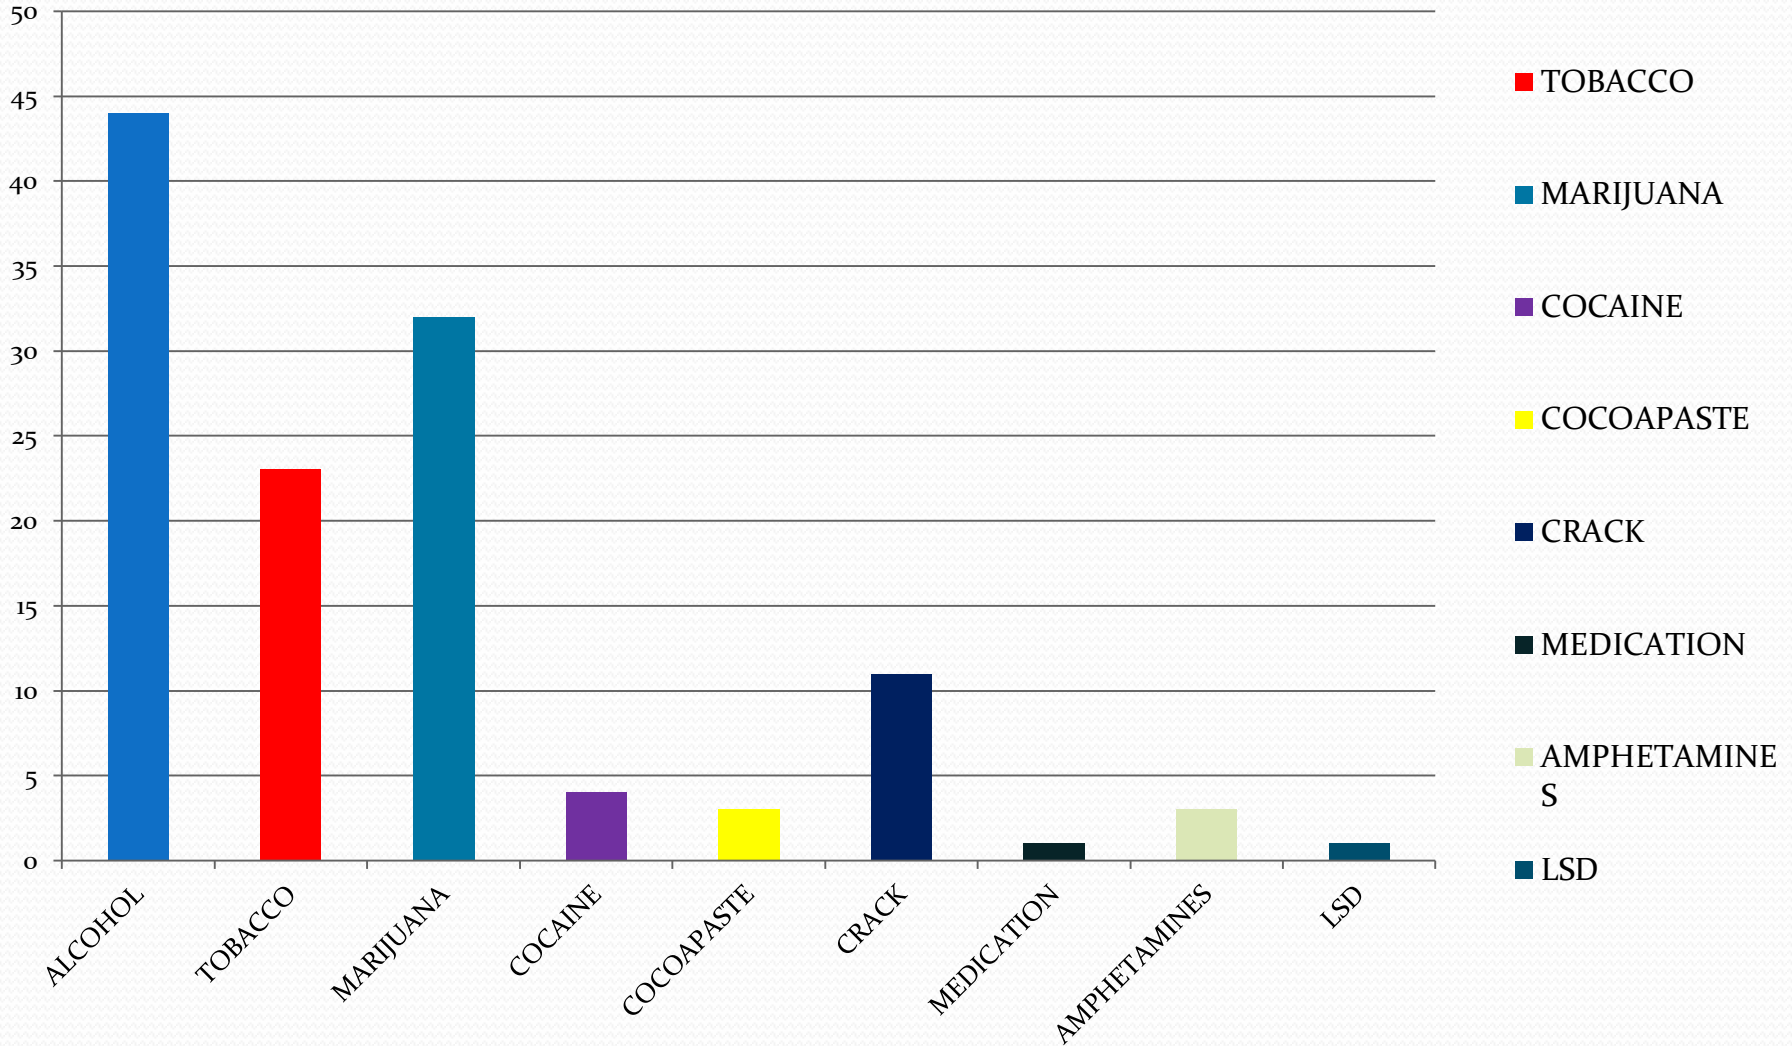

- Negative to cocaine
- Positive to cocaine

The Observatory has regularly received forms filled in by treatment centers.

Distribution of people treated by year

Use of substances by the people treated

Obstacles

- Data analysis
- The OHD confronts enormous difficulties with the owners of treatment centers who refrain from providing us with information

Publication and dissemination

- All the efforts developed by the OHD to arrive at giving birth to certain documents are in vain, because they are not published.
- For example, we can relate the fact that the latest issues of the newsletter "Dyalòg Dwòg" have remained in the drawers and suffer until expiry date.

The obstacles or challenges facing the observatory are:

- The recovery of admission forms,
- The lack of coordination with treatment centers,
- The analysis of information,
- The inclusion of this information in the annual report,
- Problems financial resources,
- Limited resources,
- Weak institutional structures.
