

COM/CITEL RES. 113 (IX-00)

ACCESS TO THE CITEL SPECTRUM USAGE DATABASE

The Ninth Meeting of the Permanent Executive Committee, COM/CITEL

CONSIDERING:

- a) That PCC.III in Resolution PCC.III/RES.41 (VI-96) resolved to establish a database on spectrum usage in the range 137-3700 MHz to assist in their preparations for ITU World Radio Conferences, and requested member countries to provide their national frequency allocations in the specified bands to the CITEL Secretariat for this purpose;
- b) That most member countries already make their National Allocation Tables available to the public;
- c) That both the member countries and the associate members contribute to the support of CITEL, and
- d) That making the Spectrum Usage database available to both members and associate members would be an added attraction to their participation in CITEL activities,

REALIZING:

That the Permanent Observers to the OAS have open access to all OAS activities,

RESOLVES:

- 1. To make the spectrum usage database available to member administrations, associate members of CITEL and Permanent Observers of the OAS, as well as entities that have signed Cooperation Agreements with CITEL.
- 2. To authorize the Steering Committee to determine whether it is economically feasible to charge a fee to all other entities for that access based on a detailed analysis of the related costs, benefits and potential legal complications that may arise.
- 3. To provide access to only those entities referred to in paragraph 1 above until the Steering Committee makes the determination referred to in paragraph 2 above.

INSTRUCTS THE EXECUTIVE SECRETARY:

To urge member administrations that have not done so to provide their national frequency allocations in the range of 137 to 3700 MHz, as previously requested, to the CITEL Secretariat, and to urge those who originally responded to review their data included in the database, and if necessary, update the information.
